

showerguard

showerglass renovation kit

Renovate shower enclosure glass by removing existing limescale...

then protect permanently against further damage with the strongest and most durable glass improvement system available

- Cleans back existing contamination
- Resists damaging chemical attack from harmful soaps and limescale deposits
- Retains and preserves long-term transparency

Clean back, then one easy application gives permanent protection – *this is the power of nano-technology*

showerguard[™]

Contents

- 1 x 150ml Signo Limescale remover
- 1 x 30ml Showerguard
- 1 x 30ml Pre-clean
- 1 x Pre-clean application cloth (white)
- 1 x Showerguard application cloth (blue)
- Gloves

Application instructions – Showerguard glass and ceramic protection

You are about to apply the most revolutionary and durable labour-saving product available in glass protection.

After a quick and simple lime-scale and contamination removal, Showerguard will provide permanent protection against the adhesion of lime-scale deposits and contaminants from soapy water, so enabling easier cleaning of your shower screen.

Showerguard can only adhere to totally clean and dry glass. After lime-scale removal, dirt and grease – including fingerprint marks – must, therefore, be removed using the enclosed glass pre-cleaning product before applying.

Use gloves when using the lime-scale remover and to avoid leaving finger print marks on the glass during pre-clean preparation.

Removing existing lime-scale and staining

Spray the Signo lime-scale remover all over the glass surface from top down. **Leave until limescale has been fully dissolved**, and then return to rinse heavily with water using cloth (not provided) to rub away all residue and **dry thoroughly**.

(Note: If all lime-scale is not removed on first attempt, re-apply, ensuring glass is completely clean and clear).*

Coating glass surfaces with Showerguard

1. Preparation of glass surface with Pre-clean

Ensure glass is completely dry, and clear of grease and dirt. Spray the inside of the glass screen with Pre-clean and rub the product into the glass surface with the pre-cleaning cloth (white). Divide the surface into sections for treatment of about 0.5m² to minimise rapid evaporation of the product.

The glass is clean when streak formation is no longer evident. Apply the Showerguard coating immediately after the whole glass surface has been pre-cleaned.

2. Coating with Showerguard

After pre-cleaning, spray Showerguard onto the inside glass surface, ensuring good coverage. Spread the product around the glass surface with the coating cloth (blue) to ensure complete coverage of the surface.

Because of the rapid evaporation of the product, divide larger glass panes into sections for treatment of about 0.5m². After coating each section of the glass, polish away the surplus from the glass surface (in one operation) with the coating cloth.

Each 30ml bottle should cover approx. 3m² of glass. Use any excess product to treat the outside of your screen, or any new ceramics or shower trays, etc.

Reaction time, quality control and maintenance

Immediately after the application of Showerguard, nano-particles form a strong bond with the glass surface in a chemical reaction.

The Showerguard surface can be handled immediately after coating. Whilst rapid bonding takes place between the coating and the glass, allow 24hrs at 20°C room temperature before using the shower for the coating to become completely inert. Once used, your Showerguard coating is in action, immediately inhibiting the adhesion of lime-scale and other contaminants. Frequency of cleaning will be dictated by conditions, water content and use. For best results, rubber blade after each use to remove repelled lime-scale.

For cleaning use a detergent-free, non-abrasive household glass-cleaning product. Whilst it is possible to use other mild detergents/shampoos, aggressive detergents can cause temporary damage to the surface, and should not be used. (Should this occur by accident, the glass surface can be repaired by using the "Signo After-Care" product.)

Abrasive cleaning agents containing tensides. Do not use abrasive scrubbing equipment for cleaning. Residue build up and dirt can be removed quickly and easily by using the appropriate glass cleaner and agitation from a soft cleaning implement and rubber blade.

Caution Note:

Lime-scale remover – Keep out of reach of children. Do not ingest. Avoid contact with skin and eyes. If contact occurs, rinse well with water and seek medical advice. Wear gloves (irritant).

Showerguard and Pre-clean – Keep out of reach of children. Do not ingest. Avoid naked flames (flammable). Ventilate area during application.

All coatings are non-toxic.

*In severe lime-scale cases continue process with more de-scaler.

Enjoy the time you've saved !
